The IPM Difference

IPM specializes in precision machining and gear cutting for OEMs in a wide variety of industries, as well as the US Military. We serve customers throughout the United States, Canada, Mexico and Europe.

WORLD CLASS PRECISION

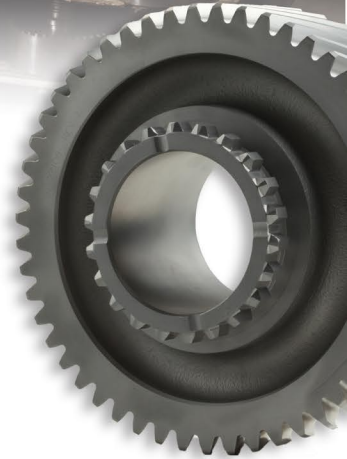

At IPM, providing precision machining to your specifications is our critical mission. Equally critical is our goal of being your worry-free supplier; one who provides solutions instead of headaches, and makes sure you get the parts you need, when you need them. We understand that customers can source machining services anywhere in the world. The difference here is all about reliability, service and trust. That's how we earn and keep our best customers.

OUR COMMITMENT

IPM is committed to earning your business — not only with precision machined parts, but with unparalleled service and support you can rely on job after job. IPM's reputation and proven reliability are your assurance of continually getting the best from the best.

FORGING PARTNERSHIPS

From our first year of operation in 1992, we have provided the highest quality of product by continuously investing in cutting-edge technologies. State-of-the-art CAD/CAM and quality control processes streamline our operation and enhance our competitive position. Beyond technology alone, our experienced production technicians and quality control experts take personal pride in each and every project. Our focus on service and reliability has never changed. We're serious about forging strong partnerships — and making it easy for you to choose IPM again and again.

MACHINING & GEAR CUTTING

solutions

CNC TURNING

With more than a dozen lathes in production and the recent additions of machines with live tooling, IPM is capable of turning parts up to 30" diameter. The largest shaft we are able to machine is 15" diameter by 42" length. We machine a wide variety of parts made from forgings, castings and bar stock, in materials ranging from carbon steel to aerospace alloys.

CNC MILLING

IPM's 25" and 15" pallet horizontal machining centers allow us to produce parts in a work envelope up to 41" x 31" x 34". Smaller parts are machined in our various vertical machining centers. Our machines utilize the latest work probing technology along with high pressure coolant systems. We also utilize up-to-date fixture techniques, allowing us to move quickly from one job to the next.

GEAR CUTTING & GRINDING

Unique among IPM's comprehensive capabilities are our in-house Gear Cutting and Grinding services which include Hobbing, Shaping, Shaving, Broaching and Gear Grinding. We are also able to ID and OD grind. For more information, please refer to our Gear Cutting and Grinding Services insert.

ASSEMBLY

If your project requires the machining of components, assembly and testing, IPM is capable and willing to take it on. We have assembled and tested numerous gear boxes for the U.S. Government, as well as a variety of assemblies for other customers.

PUT IPM'S DEPTH OF EXPERIENCE TO WORK FOR YOU.

When we first opened our doors in 1992, we knew we had the right combination of people, expertise and equipment to provide custom, precision machining. We also knew our long-term success would require delivering more than just machined components. In short, we'd need to exceed expectations.

Now in our fourth decade of operation, that commitment has continued to distinguish IPM as a trusted partner in the precision machining and gear cutting industries. Our seasoned project management and operations team provides a proven depth of experience that sets us apart. And we continue to leverage the latest technology to ensure quality, productivity and efficiency, with ongoing investments in equipment to expand our capabilities and capacity.

Today, IPM is a different company than the shop that opened in the early '90s. Yet throughout our growth, one thing remains unchanged: our commitment to your satisfaction. That's the goal that drives us every day, and the promise that customers nationwide have come to trust.

Let's talk about how IPM can exceed your expectations.
